CLOUD AND CYBERSECURITY

**Unified Cloud.
Uncompromising Security.**

608 State Street South
Kirkland, WA 98033
(425) 284-3315

Cloud and security are no longer isolated IT functions—they are the foundation of scalable, resilient businesses. Yet most organizations operate with fragmented infrastructure, reactive security, and disconnected tools. Hitech Advisors deploys specialized expertise to modernize cloud environments, integrate security into every layer, and operationalize DevSecOps—ensuring performance, protection, and compliance from day one.

THE REALITY

As organizations scale, cloud complexity and disconnected security tools obscure visibility. This leads to unprioritized vulnerabilities, slow remediation, and reactive compliance; exposing the business to risk just as it tries to innovate.

The problem isn't capability—it's coordinated execution.

THE HITECH APPROACH

We bridge the gaps between your existing, dispersed tools—unifying information and connecting workflows to modernize infrastructure, reduce risk, and enable continuous, real-time execution while working alongside your teams.

Not bolted on. Built in.
Security and scale—by design.

Built-In Security. Integrated Execution. AI-Driven Operations.

Our Three Execution Pillars

Cloud Modernization & Strategy

We design and implement scalable, high-performance cloud environments.

Security Architecture & Risk Management

We embed security and manage risk across your entire architecture.

Secure Engineering & Operations

We automate workflows across your existing tools to turn security data into actionable tasks.

What Changes When We Engage

Unified
Cloud
Architecture

Continuous

Operations

Aligned
Cross-Functional
Teams

Technical Depth & Specialty Capabilities

Cloud Strategy & Migration | Infrastructure Modernization | DevSecOps Enablement
Security Architecture | Identity & Access Management (IAM) | Threat Detection & Response
Data Protection & Resilience | Backup & Disaster Recovery | Continuous Monitoring
AI-Powered Monitoring & AIOps | Predictive Insights & Automation

Proven Results

- Reduced remediation time 60% via Nessus + ServiceNow integration
- 1-month assessment + 3-month risk alignment across server groups
- Defined 3-year cybersecurity roadmap with global standardization

From Fragmentation to Scalable Control

Align

Secure

Optimize

Scale

Cloud Strategy & Migration

Plan, migrate, and modernize applications with minimal disruption and maximum performance.

Security Architecture & Compliance

Build zero-trust security, continuous monitoring, and compliance into every layer.

Cloud Management & Optimization

Automate monitoring, scaling, and performance tuning to keep operations efficient and predictable.

Data Protection & Resilience

Protect critical data and ensure uptime through backup, recovery, and continuous threat monitoring.

DevSecOps Enablement

Integrate security into every stage of development and deployment for faster, safer software delivery.

Designed for Decision-Makers Who Value:

- Scalable Infrastructure Design
- Proactive Security Frameworks
- Operational Efficiency Gains
- Cost Optimization Discipline
- Reduced Enterprise Risk
- Execution-Driven Delivery

roadmap

Eliminate Risk, Reduce Complexity, and Scale with Confidence

The Hitech Difference

We don't simply add more tools to your stack; we unify your dispersed toolsets into a single, scalable foundation. By orchestrating workflows across your existing infrastructure and protection layers, we eliminate the silos that slow down decision-making. By partnering with your organization and leveraging AI-driven insights, we ensure continuous improvement across performance, cost, and risk—enabling you to move faster with confidence while maintaining control, resilience, and long-term scalability.
